

LAILA MAHMOOD HAJI

SKILLS

Programming Languages

JavaScript · Java · MIPS Assembly ·

CSS · C++ · C# · Python · HTML · Flutter ·

SQL / MSQl · JSON

Software Engineering System Design

Use Case design · UML Class Diagram ·

Test Case Design ·

Control Flow Diagram ·

Data Flow Diagram ·

Software Requirement Specification ·

Version Control (Git & GitHub) ·

Machine Learning · Parallel Systems ·

MPI (message passing interface) ·

AWS Cloud Computing ·

MS Project Document · MS Excel ·

MS Access · MS PowerPoint · MS Word

Testing

Manual Testing ·

Static & Dynamic Testing ·

Black Box & White Box Testing ·

Unit Testing (JUnit & Maven)

Organizational Skills

Problem solving · Critical Thinking ·

Version Control Awareness (Git basics) ·

Multitasking · Attention to Detail ·

Analytical and Research Skills ·

Strategic Thinking · Teamwork ·

Continuous Improvement and Learning ·

Time Management

SUMMARY

I'm a software engineer who enjoys working with teams and being involved in projects that actually solve problems. I'm especially interested in design, testing and artificial intelligence, and I like exploring how these areas can work together in practical ways. I tend to focus on details and enjoy the process of troubleshooting, testing ideas, and learning from mistakes along the way. I feel most comfortable in environments where communication is open and learning is encouraged. Therefore, I'm motivated to keep improving my knowledge, contribute wherever I can and learn new skills even by taking on projects outside my academic field or job scope.

EDUCATION

B.Sc. in Software Engineering

09/2022 - Present

University of Bahrain

GPA | 3.4 / 4

PROJECTS

Library Management System

Built a Java-based system to manage books, users, and borrowing records, while leading the team and testing core features

Car rental System / Airline Management System (SRS document)

Designed the system requirements, GUI, and UML diagrams for a car rental platform focusing on reservations and vehicle management. And worked on gathering requirements and designing an airline reservation system, documenting all system functions in a complete SRS.

Charity Management System Database

Designed the database structure and wrote SQL queries to manage charity records, relationships, and stored data.

Cruzer Open-Source Car Rental System (Full Stack Web Project)

Contributed to the frontend and documentation of an open-source car rental website, including a responsive Help section and FAQ system.

TRAINING / COURSES

Learn & Build Machine Learning Models with Python
