

LAILA MAHMOOD HAJI

Software Engineer — Design · Testing · AI

Riffa, Bahrain | +973 3232 3768 | Liihj323@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

Software engineering graduate (University of Bahrain, 2026) focused on the overlap of design, software testing, and applied AI. Builds full-stack systems end-to-end — from data modelling and transactional integrity to security hardening and multilingual, right-to-left interfaces — both independently and as part of a team. Detail-oriented, test-driven, and quick to pick up new tools outside the immediate job scope.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, C++, C#

Web & Backend: Node.js, Express, EJS, HTML & CSS, Vanilla JS

Data: SQL / MySQL, SQLite, Database Design

Engineering Practice: UML & System Design, Software Testing (JUnit), Maven, Git & GitHub

Mobile & Cloud/AI: Flutter / Dart, AWS Academy Cloud Foundations, Machine Learning, OCR

PROJECTS

YaldaAuto — Shop Management System *Full-stack · Solo build · Live, in use*

Node.js · Express · SQLite · EJS

- Built a self-hosted management system end-to-end for a car-accessories and window-tinting shop: stock control with low-stock alerts, sales, customer balances, PDF invoicing, and appointment scheduling.
- Stored money as integer minor units to remove floating-point error; wrapped multi-row writes in SQLite transactions and enforced valid states with schema-level CHECK constraints.
- Hardened the app for unattended till use — bcrypt password hashing, CSRF tokens, rate-limited login, single-active-session enforcement, and a strict CSP with no inline scripts.
- Localised the full interface into English, Arabic, and Persian, including right-to-left layout.

Aisha Yateem Family Counselling Centre — Case Management System *Full-stack · Live, in active use*

React · Node.js · SQLite

- Delivered a full-stack platform for a counselling centre's social services team, covering patient intakes, case logs, appointment scheduling, and staff messaging.
- Built multilingual export to PDF, Word, and Excel directly from case records.

Dosely — AI Medication Safety Scanner *Team project*

Flutter · Firebase · AI / OCR

- Collaborated on a mobile app that scans medication labels via OCR and returns a safety verdict checked against the user's health profile, explained by an integrated AI assistant.

Library Management System *Team lead*

Java

- Led a team building a Java system to manage books, users, and borrowing records; owned testing of core features.

Additional: Car Rental & Airline Reservation System — requirements, GUI design, and UML/SRS documentation; Charity Management Database — relational schema and SQL; Cruiser (open-source) — frontend and Help/FAQ documentation.

EDUCATION

B.Sc. in Software Engineering — University of Bahrain

September 2022 – September 2026

GPA: 3.44 / 4.00

CERTIFICATIONS

- Learn & Build Machine Learning Models with Python — Coursera
- AWS Academy Cloud Foundations — AWS Academy
- Parallel Computing with MPI — Coursera, University of Colorado Boulder
- Concurrent and Parallel Programming in Python — Coursera, Packt
- Fundamentals of Accelerated Computing with Modern CUDA C++ — NVIDIA

LANGUAGES

Arabic (Native) · English (Fluent)
